## Professional Summary

SOC Analyst with 3 years of hands-on learning and practical experience in cybersecurity, network security, threat detection, and incident response. Skilled in SIEM tools, log analysis, incident investigation, vulnerability assessment, and the MITRE ATTCK framework. Experienced in performing security analysis through hands-on labs, investigating simulated security incidents, and developing threat detection use cases. Proficient in Linux, networking fundamentals, KQL, and security tools, with a focus on threat hunting, digital forensics, and incident response.

## Skills

SIEM (Microsoft Sentinel, Splunk, Wazuh), Security Monitoring, Alert Triage, Incident Response, Threat Hunting, Log Analysis, MITRE ATTCK, IOC Analysis. Network Security (TCP/IP, DNS, HTTP/HTTPS), Wireshark, IDS/IPS, Firewalls, Windows Event Logs, Sysmon, Linux, Python, PowerShell, Digital Forensics (DFIR).

## Work Experience

**OsceaNext – Ships Management and Maintenance Application (Mobile/Web)** May 2026 – Present
*Security Engineer* *Manila, Philippines / Remote*

- Partnered with Marine Architects and Marine Engineers to translate operational requirements into product workflows, functional specifications, test scenarios, and technical solutions.
- Designed and refined end-to-end workflows for ship tracking, management, and maintenance, prioritizing usability, consistency, and a seamless user experience.
- Built automation approaches for functional, regression, and scenario-based testing of maritime application workflows to improve release quality.
- Contributed secure-by-design practices across the product, embedding security into feature planning and design decisions.

**Mastercard (Forage)** 2025
*Security Analyst* *Virtual*

- Analyzed business and technical scenarios to identify security risks and threats, and recommended security controls to improve security posture.
- Documented findings and risk-management recommendations in a clear, stakeholder-ready format.

## Personal Projects

**End-to-End SOC Lab | Microsoft Sentinel, Defender XDR, KQL**

- Configured a security monitoring lab to analyze Windows security events and endpoint telemetry.
- Investigated suspicious authentication activity and endpoint alerts to simulate real-world SOC operations.
- Applied MITRE ATTACK to map suspicious behaviors and assess potential security threats.
- Documented investigation findings, alert triage procedures, and recommended incident response actions.

**Threat Hunting  Detection Engineering | KQL, Microsoft Sentinel**

- Developed KQL queries to detect brute-force attempts, repeated authentication failures, and suspicious endpoint activity.
- Analyzed security logs to identify anomalies, investigate potential threats, and correlate related events.
- Evaluated detection logic and false positives to improve alert accuracy and investigation efficiency.
- Mapped detection scenarios to MITRE ATTCK techniques and documented detection rules and investigation findings.

## Education

**Lovely Professional University** 2022 – 2026
Bachelor of Technology in Computer Science and Engineering / Cyber Security Phagawara, India
CGPA / GPA: 6.50

## Certifications

- CompTIA Linux+ (XK0-005), Cybrary May 2025
- Cloud Computing, NPTEL (SWAYAM) – Jul–Oct 2024 Jul–Oct 2024
- Google Cybersecurity Certificate, Coursera – Dec 2023 Dec 2023
